

adrian knight

comblé
for orchestra

2010
score

to the memory of arman esmailzadeh anari

first performance

december 9, 2010
morse recital hall, sprague hall, yale school of music
new haven, ct, usa

philharmonia orchestra of yale
adrian slywotzky, conductor

special thanks to john, maura, domenic, adrian s, SMIC and marjolaine

guide to the notation

general

crescendo / diminuendo to / from silence

woodwind & brass

un-pitched air sound (on single line staves) /
air sound (finger the specified pitch) (on five line staves)

percussion

unmeasured tremolo (as fast as possible)

scrape slowly in rotary motion (sandpaper blocks and styrofoam)

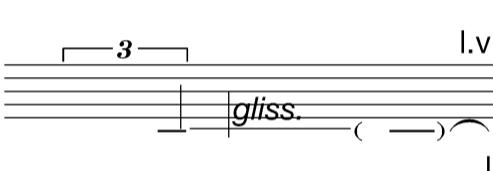

down-bow (starting at the frog) / up-bow (starting at the tip)
used for bowed instruments (tam-tam, vibraphone)

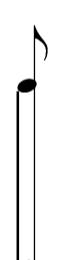

harp

half-pedal glissando (depress the pedal half-way to its first position and let the string vibrate (buzzing) against the metallics in the soundboard)

piano

cluster between specified pitches (white keys)
use forearms and elbows

strings

very gently pulsating on single bow strokes
(no separation)

very slow, quiet scratch tone

bow on the designated string behind the bridge

subharmonics
apply more and more bow pressure until a pitch one octave beneath the notated pitch is heard

note

"comblé" was written july-october 2010 in stockholm, new haven and new york.
it was written for the yale philharmonia. it is dedicated to the memory of arman esmailzadeh anari.

note to the performers

the opening of the work must be very balanced and restrained. all notes should, unless otherwise specified, essentially fade in and out in a series of waves, breaths or envelopes. the pulsations in strings should be very subtle and should all be executed within single bow strokes (or as long as a bow stroke lasts) using variable bow pressure: they are related to louré, albeit much more indistinct, but must not bear any resemblance to a bow tremolo (there should be no separation of notes).

there are essentially two different sound worlds in this work: (1) an extremely slow-moving, pitch-based world rooted in immediately recognisable tonal harmonies and (2) a wide variety of non-pitched sounds (air sounds, scratch sounds, subharmonics, various percussion instruments). the work has three large sections and a fourth, short, concluding section. in the first section of the work (bb. 1-74), five triadic chords are articulated at an extremely slow tempo (approx. 40 seconds per chord), played by constantly variable orchestral groupings. the second section of the work (bb. 75-131) focuses relentlessly on the pitches C#, E, G# and B. the third section (bb. 132-219) features a 40 second loop hovering around B minor that is repeated five times (each time differently orchestrated). in the fourth section, twelve chromatically saturated chords are played as loud as possible to obliterating effect.

instrumentation

2 flutes
oboe
english horn
clarinet in B
bass clarinet in B
bassoon
contrabassoon

2 french horns (with practice mutes)
2 trumpets in C (with practice mutes)
trombone (with practice mute)
bass trombone (with practice mute)

2 percussionists

1 *

mylar plastic
sandpaper blocks (1)
tin foil
rainstick (1)
tam-tam
'cello or double bass bow

2 **

vibraphone
styrofoam (two pieces, one small and one large (stationary on table))
sandpaper blocks (2)
paper bag
rainstick (2)
sizzle cymbal (suspended)
'cello or double bass bow

harp

upright piano with practice mute or sampler ***

7 first violins (divided 1.1, 1.2, 1.3, 1.4, 1.5, 1.6, 1.7)
5 second violins (divided 2.1, 2.2, 2.3, 2.4, 2.5)
4 violas
4 violoncello
2 double basses

(this is the minimum number of string players since all parts are soloistic.
for larger orchestras, it is advisable to double the number of strings for a total of: 14.10.8.8.4.)

* percussion 1 plays mylar plastic, sandpaper blocks (1), tin foil, rainstick (1) and tam-tam. of these instruments, all but the tam-tam and rainstick (1) should be placed on a stand and amplified. the sound of the mylar plastic, sandpaper blocks (1) and tin foil must be dry and distinct and even though played very softly it should be clearly heard in relation to the music in the rest of the orchestra.

** percussion 2 plays vibraphone, styrofoam, sandpaper blocks (2), paper bag, rainstick (2) and sizzle cymbal (suspended). of these instruments, all but the vibraphone, sizzle cymbal and rainstick (2) should be placed on a stand and amplified. the sound of the styrofoam, sandpaper blocks (2) and paper bag must be dry and distinct and even though played very softly it should be clearly heard in relation to the music in the rest of the orchestra.

*** the piano must be equipped with a practice mute (usually, a special button like an organ stop or a position on the middle pedal is used to engage a soft felt carpet that dampens the sound of the strings before the hammer hits the string). the sound is extremely soft and mellow and must be amplified in order to be heard. two condenser microphones should be used, positioned very close to the strings, one for the low register and one for the high register. if the appropriate instrument cannot be procured, an electronic substitute is available from the publisher.

the score is written in C (contrabassoon and double basses sound one octave lower than written).

comblé for orchestra
